

MESH BANNERS

PRODUCT DESCRIPTION

Mesh is used where weight and wind are a factor in the installation process and durability of the banner's life span. There are several types of mesh available, each with its own specific amount of blow-through.

NOTE: The term *blow-through* refers to the percentage of surface area that consists of printable material against the amount of holes in the material. (For example, *blow-through* is 70/30. This proportion means there is 70% printable surface area and 30% holes.)

SUGGESTED APPLICATIONS

Construction Sites	Fence Banners
Building Banners	Seat Kills
Sporting Events	Stadiums

MATERIALS

- » Mesh (73/27)
- » Mesh Plus Double-Sided (90/10)
- » Speaker Mesh (30/70)
