DiamondFlex™

Premium Engineered Banner Stands

EVERY DETAIL COVERED

Spring made from German steel to eliminate rust and provide lasting strength. Graphics retract into the base, protecting it from rough travels. 2mm thick wall for strength and durability. Special micro hook & loop is ultra-thin so banners retract smoothly.

TABLE TOP CONVERSION

Any DiamondFlex™ banner stand is easily transitioned into a table top display in one fluid motion.

3 PIECE DESIGN

1. Top Rail   **2.** Support Pole   **3.** Base

Keep graphics safe and in place with retractable base stands that store the graphics when not in use. Pull out for quick setup.

PRECISION ENGINEERED

The graphic support pole is extruded, drawn and hardened aluminum. This 3-part process ensures your graphic stays perfectly straight over long periods of time.

PURPOSEFULLY DESIGNED

Support pole breaks down for packing but remains connected with a multi-stranded bungee cord. The inside of the pole is debarred for a smooth interior to prevent tears to the cord.

SUPERIOR STABILITY

A footprint of 300 square inches and four points of contact with the floor, DiamondFlex™ offers superior stability because the base is wider than the average in the industry.

RETRACTABLE GRAPHICS

Keep graphics safe and in place with retractable base stands that store the graphics when not in use. Pull out for quick setup.

ENGINEERED TO LAST

Aluminum extruded at 400 degrees as a strong yet elegant shape. 10 micron acid anodized finish for hardness and durability.

CHOICE OF GRAPHICS

DiamondFlex™ includes your choice of two high-quality banners: Standard Anti-Curl or Fabric.

DF401 SWAP CARTRIDGE SYSTEM

DiamondFlex™ 401 Swap features a changeable banner cartridge system to make swapping graphics fast and easy.

DURABLE CARRYING BAG

A strong 600 denier polyester carrying bag with handle and shoulder strap is included.

OPTIONAL HARD CASE

A wheeled hard case is available for the DF400 only.
